

GU DTU

G.U-BKS underfloor drives for swing doors are used in:

- historical buildings
- shopping centres
- hospitals
- hotels
- modern and transparent entrance areas

Transparency and concealed mechanics combined with functionality and high quality performance:

The innovative underfloor drive swingMaster DTU offers architects and planners a unique possibility of automating swing door systems.

On the basis of a well proven technology, all demands on a reliable, modern swing door drive are realised.

In modern shop construction it captivates by providing unobtrusive automation.

With this drive system the automation of all glass entrance systems or doors in historical or listed buildings is efficient and provides comfortable access to all users.

The use of an optional battery allows for a desmoking function.
